

**PRETREATMENT HEARING AND PUBLIC MEETING FOR THE  
PROPOSED EFFLUENT LIMITATIONS GUIDELINES  
AND STANDARDS FOR THE  
IRON AND STEEL POINT SOURCE CATEGORY  
WASHINGTON, D.C.  
FEBRUARY 20, 2001**

The Environmental Protection Agency (EPA or the Agency) hosted a Pretreatment Hearing and Public Meeting for the proposed effluent limitations guidelines and standards for the Iron and Steel Point Source Category in the EPA auditorium on February 20, 2001. The pretreatment hearing gave the public the opportunity to provide oral comments on the proposed pretreatment standards and was held from 9:00 to 10:30. The public meeting was held subsequent to the pretreatment hearing and enabled EPA to make a presentation which reviewed the proposed regulation and also to answer questions on various aspects of the proposal. Attendees at the meeting included representatives from industry, EPA's Office of Water, EPA's Office of Research and Development, State of Indiana (IDEM), and EPA's contractors for this project. A list of attendees is included in Attachment A.

Two presentations were given during the pretreatment hearing. The text of these two presentations are in the public record for this rulemaking.

During the public meeting, EPA presented a summary of the proposed regulation. Topics covered during the presentation included:

- Background information on effluent guidelines;
- Summary of the proposed iron and steel rule; and
- Issues addressed in the recent notice.

At the meeting, EPA encouraged attendees to supplement their questions and comments with written comments and supporting data. To facilitate this effort, EPA provided a set of data-quality protocols for use when submitting data for this rulemaking effort. This handout, EPA's presentation, and a list of the meeting attendees are included in the public record and were posted on the EPA Iron and Steel web site at <http://www.epa.gov/OST/ironsteel/>.
